ACADEMIC APPOINTMENTS

Postdoctoral Research Associate   *June 2024 – Present*

Department of Physics, Washington University, Saint Louis, MO.
Supervisor: Professor Jim Buckley

- Developing real-time scheduling theory and platforms for timely, safe, and secure CPS.
- **ADAPT mission:** Software and firmware lead for NASA-partnered suborbital high-energy telescope.
- **AstroRTS:** Established new initiative for real-time computing in astrophysics applications.
- **COSI mission:** Accelerating data analysis workflows for NASA SMEX orbital gamma-ray telescope.
- **ADMX experiment:** Software and firmware development for DoE-led dark matter detector.
- **VERITAS observatory:** Firmware development for ground-based gamma-ray observatory.

EDUCATION

Ph.D. in Computer Science, Washington University in St. Louis   *August 2019 – May 2024*

Dissertation: *Improved Models of Elastic Scheduling*
Adviser: Professor Chris Gill

M.S. in Computer Science, Washington University in St. Louis   *August 2016 – May 2018*

Graduate Certificate in Data Mining & Machine Learning

B.A. in Physics and Mathematics, Washington University in St. Louis *August 2009 – May 2013*

PREVIOUS EMPLOYMENT

Seiler Instrument, Saint Louis, MO: **Information Systems Manager**   *June 2016 – August 2019*

- Directed information systems and software development teams.
- Managed company cybersecurity, including for DoD-controlled technical information.
- Oversaw compliance of government contract clauses related to information systems and cybersecurity.

Seiler Instrument, Saint Louis, MO: **Network Administrator**   *July 2013 – June 2016*

AWARDS and HONORS

SIES Outstanding Paper Award: Paper [7]   *November, 2024*

ISORC Best Paper Award: Paper [11]   *May, 2024*

PhD Honors, Washington University   *Academic years 2020-21, 2021-22, & 2022-23*

Received Honors outcome (top 15-20% of students) as a result of annual Periodic Review of Doctoral Students performed by the computer science department.

RTCSA Best Paper Award: Paper [13]   *August, 2022*

May 2022: CPS Rising Star: *May, 2022*

Selected as a Rising Star for the inaugural CPS Rising Stars Workshop held at the University of Virginia.

GRANTS AWARDED

WashU OVCR Seed Grants for Interdisciplinary Research: $50k

- Title: "Integrated Real-time Control and Scheduling for Multi-messenger Physics Applications"
- Participation: Writer, Funded Postdoc
- Award Date: June 14, 2024
- Notes: This internally funded seed grant funds new interdisciplinary research, requiring a collaboration between at least two schools of the university. I brought together three professors to serve as principal investigators: Chris Gill (PI, Department of Computer Science and Engineering, McKelvey School of Engineering), Andrew Clark (Co-PI, Department of Electrical and Systems Engineering, McKelvey School of Engineering), and Jim Buckley (Co-PI, Department of Physics, College of Arts and Sciences). This seed grant was entirely used to cover my initial equipment purchases and salary for the project.
- Publications: [1], [2], [3], [4], [5], [6], [7], [20], [21], [22], [23], [24], [30], [31], [32]

GRANTS PENDING

NASA APRA 2025: $2M

- Title: "Development of enhanced detectors for the Antarctic Demonstrator for the Advanced Particle-astrophysics Telescope (ADAPT2)"
- Participation: Co-PI
- Award Date: **Pending clarification of NASA budget**
- Notes: This proposal has been marked as one of 47 "selectable" proposals out of 203 submitted to the NASA Astrophysics Research and Analysis (APRA) program. It received a score of "Excellent/Very Good" (the second-highest possible) from the review panel. **This grant is expected to be awarded, pending clarification of the final congressional budget.**

NSF CPS: $600k

- Title: "CPS: Small: Real-Time Coordinated Search for Astrophysical Transients by Multimodal Detectors"
- Participation: PI
- Submission Date: 05/30/2025
- Notes: The proposed research will enable real-time scheduling, search planning, and control of coordinating telescopes for rapid follow-up observations of astrophysical transients (e.g., binary neutron star mergers and supernovae) detected via prompt, high-energy messenger signals. If funded, we will build and deploy robotic telescopes to geographically disperse locations concurrently with the flight of the suborbital ADAPT telescope to respond to gamma-ray burst (GRB) alerts.

NSF CPS: $1.2M

- Title: "CPS: Medium: A Cyber-Physical Operating System Framework for Rigorous Co-design and Joint Enforcement of Real-Time Control and Scheduling"
- Participation: Co-PI
- Submission Date: 05/02/2025
- Notes: The proposed research will develop new real-time control and scheduling models. Identified relationships will be encoded within a novel software synthesis framework driven by a checkable trait-based type system. These will enable composition of custom cyber-physical operating system (CPOS) images from libraries of control, scheduling, application, and platform features to ensure property-conformant system behavior atop multi-core, GPU, and FPGA hardware.

INVITED TALKS

October 2025: 22nd Meeting of the High Energy Astrophysics Division (HEAD) of the AAS
Invited to present a talk titled, "Real-Time GRB Localization on the Antarctic Demonstrator for the Advanced Particle-astrophysics Telescope (ADAPT)" at a special session of the 22nd AAS HEAD meeting titled, "Balloon and sounding rocket technology developments: a platform for early-career instrumentation scientists."

July 2024: Industrial Challenge, ECRTS
Submitted an early-stage proposal for the annual industrial challenge at the 36th Euromicro Conference on Real-Time Systems (ECRTS), July, 2024. The proposal, titled "Elastic Scheduling for ARM AR HUD," outlined an approach for adaptive scheduling to guarantee timeliness in dynamic driving environments for ARM's proposed augmented-reality heads up display (AR HUD), a system to project information in real-time onto a vehicle's windshield to enhance driver awareness. It was accepted by three members of ARM Research to be presented during the industrial session.

April 2023: Colloquium, Saint Louis University
Presented a talk titled, "Constrained Optimization of Elastic Task Adaptation in Real-Time Systems" for Saint Louis University's computer science colloquium.

TEACHING

All listed courses were taught at Washington University in St. Louis.

2025FL: CSE 5402S "Concurrency and Memory Safe System Software Development"
Guest lectured on Tuesday, September 23. Topics: Operator Overloading and Closures.

2024FL: CSE 565M "Acceleration of Algorithms in Reconfigurable Logic"
Guest lectured on Tuesday, November 19. Topic: HLS-Based FPGA Data Preprocessing on the ADAPT High-Energy Astrophysics Telescope.

2023FL: CSE 428S "Multi-Paradigm Programming in C++"
Guest lectured on Thursday, October 19. Topic: Standard IO Library.

2023SP: CSE 522S "Advanced Operating Systems"
Co-instructed the course, further refining the material based on feedback and experience from the previous semester.

2022FL: CSE 428S "Multi-Paradigm Programming in C++"
Guest lectured on Tuesday, November 1. Topic: Overloading and Templates.

2022SP: CSE 522S "Advanced Operating Systems"
Co-instructed the graduate level operating systems course that follows CSE 422S. Led an effort to change the focus and scope of the course. Developed new lecture materials and assignments, which composed most of the course syllabus.

2021FL: CSE 422S "Operating Systems Organization"
Guest lectured on Monday, September 20 and Wednesday, September 22. Topics: Time Sources and Timing, Kernel Tracing and Debugging.

2021SP: CSE 422S "Operating Systems Organization"
Performed further **syllabus refinement**, following observations from the previous semester and semester-end student course evaluations. Also assisted with grading final projects.

2020FL: CSE 422S "Operating Systems Organization"
Co-instructed the advanced-undergraduate operating systems course at Washington University in St. Louis, and led a significant restructuring of course content, under the supervision of Professor Chris Gill. Refined content is still being used in the current syllabus.

COLLABORATIONS

APT and ADAPT (October 2019 – Present)
The Advanced Particle-astrophysics Telescope (APT) is a planned space-based observatory designed to localize MeV to TeV transients such as gamma-ray bursts (GRBs) in real time using onboard computational hardware. I am the software and firmware lead for the Antarctic Demonstrator for APT (ADAPT), a NASA-funded, prototype high-altitude balloon mission anticipated to fly during the 2026–27 season.

AstroRTS (June 2020 – Present)
I formed the AstroRTS collaboration to bridge the expertise of the real-time systems community with open problems in time-domain and multi-messenger astrophysics, with a focus on deadline-constrained localization of transient astrophysical phenomena, e.g., GRBs. This involves coordination of prompt transient detection and reconstruction of spatial probability maps describing their location (e.g., as will be done aboard ADAPT and APT), followed by search of the probability space by optical telescopes, which must detect the transient within captured images in real time. The collaboration currently spans three institutions across two continents, and we are working to build international partnerships with participating observatories.

COSI Science Team (March 2023 – Present)
The Compton Spectrometer and Imager (COSI) is a NASA Small Explorers (SMEX) mission planned for launch in 2027. COSI is a gamma-ray telescope that will provide imaging, spectroscopy, and polarimetry of both persistent gamma-ray sources and GRBs. Together with other members of the collaboration at Washington University, I have

worked to accelerate offline data analysis workflows, including gamma-ray image reconstruction and GRB likelihood mapping. Most notably, we achieved an average 60x speedup over the original analysis software for Richardson-Lucy iterative image deconvolution.

MechWorks (April 2023 – August 2024)

A joint collaboration between Purdue University mechanical and structural engineering and the Washington University in St. Louis computer science and engineering department. I developed scheduling theory and platforms to support provably schedulable parallel execution for real-time hybrid simulation (RTHS) of structural response to earthquakes.

STUDENTS SUPERVISED

During my PhD studies and postdoctoral appointment, I have had the pleasure of mentoring and supervising the work of several talented undergraduate, master's, and PhD students.

Primary Supervision

- Jenny Yu, undergraduate student, AstroRTS project, Summer and Fall 2025.
- Jesse Myoung, undergraduate student, ADMX experiment, Fall 2025.
- Qinzhou (Nick) Song, undergraduate and master's student, APT collaboration, Summer and Fall 2023, Fall 2024, and Spring 2025.
    - Publications: [9], [20], [35]
- Benjamin Standaert, undergraduate student and master's thesis, Fall 2023 through Fall 2024.
    - Publications: [16], [17], [25]
- Boran (Brant) Yang, REU student, APT collaboration, Summer and Fall 2024.
    - Publications: [32]
- Nhan (Bill) Nguyen, undergraduate student, APT collaboration, Fall 2024.
- Alson Yao, undergraduate student, Fall 2024.
- Swapnil Das, REU student, APT collaboration, Summer 2024.
- Ethan Woolbert, undergraduate student, APT collaboration, Spring 2024.
- Jack Heuberger, master's student, APT collaboration, Fall 2023 and Spring 2024.
- Jacob Silbert, undergraduate student, APT collaboration, Fall 2023.
- Ulysses Atkeson, undergraduate student, APT collaboration, Spring 2023.
    - Publications: [35]

Joint Supervision and Mentoring

- Zhuoran (Jordan) Sun, master's and PhD studies, Fall 2022 though present.
    - Publications: [6], [18]
- Longhao Huang, master's project, APT collaboration, Spring 2024 through Spring 2025.
    - Publications: [32]
- Augustus (Gus) Thomas, undergraduate student, APT and COSI collaboration, Fall 2024 through Spring 2025.
- Tobias Pristupin, undergraduate student, Fall 2023.
- Thomas Lang, undergraduate student, APT collaboration, Spring and Summer 2023.
    - Publications: [9], [35], [45]
- Muhan Yu, undergraduate student, Summer 2023.
- Diana Pacheco-Garcia, undergraduate student, Fall 2022.
    - Publications: [35], [45]
- Will Gozlan, master's project, Spring and Fall 2022.

SERVICE and OTHER ACTIVITIES

Journal, Conference, and Workshop Reviewing and Program Committees

- 🪑 **Workshop Chair, OSPERT 2026**
  - Workshop on Operating Systems Platforms for Embedded Real-Time applications (OSPERT), July 2026.
  - Held concurrently with ECRTS 2026.
- **TPC Member, RTAS 2026**
  - Technical program committee member, 32nd IEEE Real-Time and Embedded Technology and Applications Symposium (RTAS), May 2026. Held as part of CPS-IoT Week.
- 🪑 **Workshop Co-Chair, OPERA 2025**
  - Workshop on OPtimization for Embedded and ReAl-time systems (OPERA), December 2025.
  - Held concurrently with RTSS 2025.
- **TPC Member, Brief Presentations, RTSS 2025**
  - Program committee member, Brief Presentations Track, Real-Time Systems Symposium (RTSS), December 2025.
- **TPC Member, Posters and Demos, RTCSA 2025**
  - Program committee member, Posters and Demos session, IEEE International Conference on Embedded and Real-Time Computing Systems and Applications (RTCSA), August 2025.
- **Reviewer, Journal of Systems Architecture, Summer 2025.**
- **Reviewer, IEEE Transactions on Computers, Summer 2025.**
- 🪑 **Workshop Co-Chair, OSPERT 2025**
  - Workshop on Operating Systems Platforms for Embedded Real-Time applications (OSPERT), July 2025.
  - Held concurrently with ECRTS 2025.
- **Artifact Evaluator, ECRTS 2025**
  - Artifact evaluation program committee member, Euromicro Conference on Real-Time Systems (ECRTS), July 2025.
- **Best Paper Award Committee, ECRTS 2025**
  - Served on committee to select Best Paper Award among outstanding submissions.
  - Euromicro Conference on Real-Time Systems (ECRTS), July 2025.
- **TPC Member, OPERA 2025**
  - Program committee member, Workshop on Optimization for Embedded and Real-Time Systems (OPERA), December 2024.
  - Held concurrently with RTSS 2024.
- **TPC Member, JRWRTC 2024**
  - Program committee member, Junior Researcher Workshop on Real-Time Computing (JRWRTC), November 2024.
  - Held concurrently with RTNS 2024.
- **Artifact Evaluator, ECRTS 2024**
  - Artifact evaluation program committee member, Euromicro Conference on Real-Time Systems (ECRTS), July 2024.
- **Reviewer, IEEE Transactions on Computers, Fall 2022.**

Other Conference and Workshop Service Activities

- **Publicity Chair, RTSS 2025.**
- **Discussant, OPERA 2024**

- o Discussant for paper, Catherine E. Nemitz and Tanya Amert, "Optimizing Lock Granularity for Non-Nested Resource Access under the Priority-Ceiling Protocol." OPERA 2024.
- **Session Chair, RTNS 2024**
  - o Chair of session, "Power-aware, Fault-tolerant Systems." RTNS 2024.
- **Discussant, OPERA 2023**
  - o Discussant for paper, Gaspard et al., "Feasibility analysis of real-time periodic multi-phase tasks on unrelated multiprocessor platforms." OPERA 2023.

Thesis Committees

- Thesis committee member, Nick Song, Master of Science in Computer Science, "Generalization of ADAPT HLS Computational Pipeline." April 30, 2025.
- Thesis committee member, Benjamin Standaert, Master of Science in Computer Science, "Schedulability Analysis of Multi-Phase Limited-Preemption Tasks." December 6, 2024.

Advisor, WashU Satellite (Fall 2024 – Present)

WashU Satellite is a student-led, primarily undergraduate design team with planned CubeSat and related missions, including the fast-slewing optical ADAPT Incidence Resolution and Imaging Subsystem (AIRIS) to fly as a piggyback instrument with the ADAPT mission. I act as co-adviser and mentor to the group, along with Jim Buckley in the physics department and Andrew Clark in the Electrical and Systems Engineering department.

Postdoc Representative, Physics Department (Fall 2024 – Present)

I serve as one of the two postdocs in the physics department to bring questions and concerns from the postdocs to the department faculty, and to attend faculty meetings to report news and departmental issues back to the postdocs.

Computing Committee, Physics Department (Fall 2024 – Present)

I currently serve on the Computing Committee for the Department of at Washington University in St. Louis to advocate for students and postdocs and educate them on the availability of departmental computational resources for analysis and simulations.

Friends of Honduras – Board of Directors (2017 – Present)

Friends of Honduras partners with the remote communities surrounding San Marco de Sierra, Honduras to bring medical and educational resources, agricultural support, clean water technologies, and hope to the poorest of the poor in the region. I have served on the board of directors since its inception, and I have travelled to the same villages 9 times since 2011 (originally under the umbrella of a different organization).

Graduate Student and Postdoc Advisory Council (Fall 2023 – Spring 2024)

I served on the Graduate Student and Postdoc Advisory Council to the Center for Teaching and Learning (CTL) at Washington University in St. Louis during the 2023 academic year. I assisted the CTL in making decisions related to graduate student and postdoc programming. I also help to coordinate monthly events, including faculty panel discussions and informal gatherings, to allow graduate students and postdocs to gather together and discuss relevant teaching and learning related topics.

Graduate Council – Executive Committee (Fall 2020 – Spring 2021)

I served as the Computer Science and Engineering department's student representative to the Graduate Council of Washington University in St. Louis. I was also selected to be a member of the Graduate Council's Executive Committee.
